The DVD has a very well structured approach to introducing and demonstrating each of the basic techniques scattered with shared experiences of the practicalities of performing the processes demonstrated that have been won through years spent at the forge and anvil. The on screen presentation and quality of camera work is first class and viewer

interest never wanders. Plea: There needs to be a second DVD demonstrating the creation of a few of the designs that Peter creates taking viewers through the processes and skills that enable Peter to craft such appealing works. This DVD to compliment the basic techniques so ably presented in the current DVD.,

Explains the fundamental techniques of working with hot iron and steel, and suggests how those techniques can be used creatively in designs.
