Richard Butz, John Montague, William Bartoo : Building the Six-Hour Canoe before purchasing it in order to gauge whether or not it would be worth my time, and all praised Building the Six-Hour Canoe:

0 of 0 people found the following review helpful. Five Stars By EdI give it the generic Canadian top tier of praise: Nothing wrong with this book. 0 of 0 people found the following review helpful. great subject. By frank mWell made. great subject. 0 of 0 people found the following review helpful. I paddle By User This is a great little book about building a great little boat. It is a little out of date though. If I were to build the boat today following the plans in this book, I would eliminate the chine logs and instead use the "stitch and sew" method of construction. Actually I would use duct tape to hold the pieces of plywood together and use resin (epoxy or polyester) and glass tape to fasten it all together. Then remove the duct tape and remove rough edges. Also I might call it a pirogue instead of a canoe.

A guide to building a canoe that contains scale plans, specifications, a tool list, step-by-step instructions, and even a helpful explanation of how to paddle the canoe. All the building operations are clearly illustrated with photos and sketches. The canoe is constructed from a single 4'x16' (or two 4' x 8' sheets) sheet of marine plywood and a few pieces of dimensional lumber and, with epoxy glued seams, is watertight from the moment it hits the water. When completed, the canoe is 15'3" in length with a 31" beam. Inexpensive to build using ordinary tools and materials, the canoe gives everybody access to boatbuilding and a boat.
